

BIODIVERSITY IN WATERY PLACES

Hi, I'm Ronan the Harbour Seal!

Come and learn about water-based habitats for biodiversity with me!

My favourite place is a coastal habitat, but I have friends in lots of watery places like rivers, lakes, deep in the ocean and even on the beach!

Can you find all of the water loving plants, animals, insects and molluscs in these pictures?

Use **#Biohunt** and share with us to win a prize!

Ronan's Helpful Hint:
"Pssst... Look in some of the watery habitats I mentioned before!"

Scavenger Hunt

Common Blue Damselfly

Tadpoles (with legs)

Otter

Sea Thrift

Grey Heron

Bladder Wrack Seaweed

Water Strider

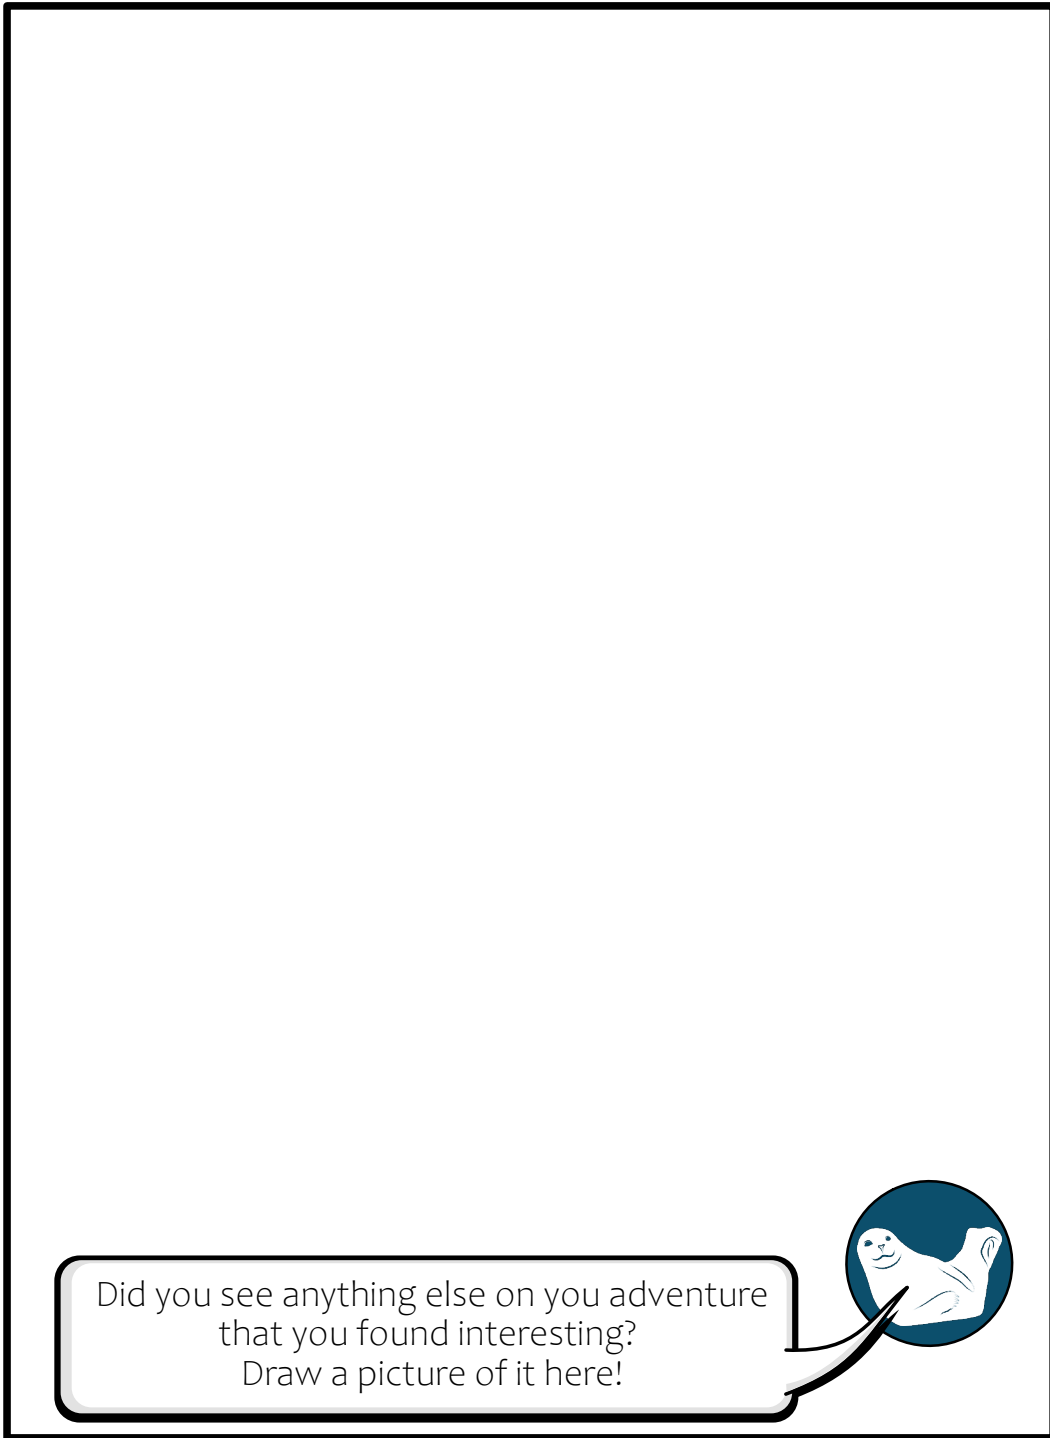

Brooklime

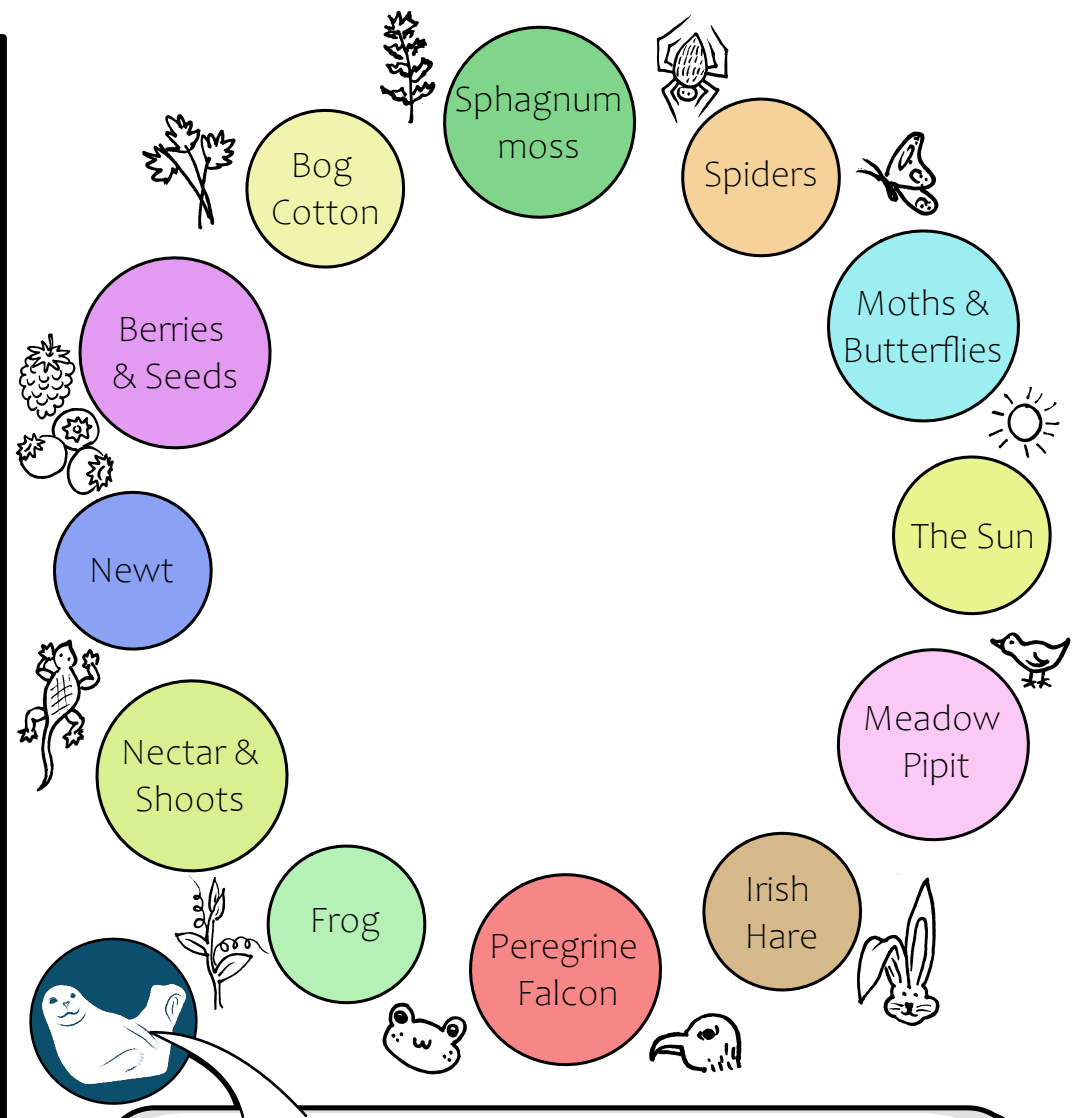

Cockle

Did you see anything else on your adventure that you found interesting? Draw a picture of it here!

A food web shows how different plants and animals connect and depend on each other to live and grow. The more variety of plants and animals there is, the healthier a habitat will be!

Can you draw the connections between all of the plants and animals in this Bogland Food Web?
